ABSTRACT OF THE INVENTION

A self-powered awning having a drive assembly with a motor at least
partially inserted into an awning roll-up tube for deploying/retracting th
awning. The awning uses a rechargeable battery and/or one or more sola
panels to charge the rechargeable battery and/or power the awning
Accordingly, the awning can be installed onto a building or vehicle wall withou
requiring the awning to be wired to the building or vehicle electrical system
The drive assembly and power system can also be retrofitted to existing
awnings.
